Agencies Need More Than Static Portfolios

The goal: create an interactive agency platform with live calculation tools, complete bilingual RTL fidelity, and smooth 3D visuals.

Key Objectives:

- ✦ Real-time campaign configurator with live estimates
- ✦ Arabic (RTL) & English (LTR) with mirrored layouts
- ✦ Zero external CDN dependencies & sub-second loads

Engineered with a Modern Stack

Clean architecture, provider-agnostic database access, and strictly self-hosted vendor libraries.

ASP.NET Core 8
High-throughput MVC backend

EF Core 8
Code-first SQLite & SQL Server

Three.js (r169)
Interactive WebGL golden ring

GSAP & ScrollTrigger
Storytelling & orbital physics

Bootstrap 5 RTL
Bi-directional layout parity

xUnit & Moq
11 automated unit tests

Key Technical Takeaways

Real lessons learned from designing for bidirectional typography and mobile WebGL hardware.

1. RTL Typography Protection
Word-level animation preserves cursive Arabic connections without breaking letter glyphs.

2. Mobile GPU Fallbacks
Pixel ratio clamping and CSS gradients ensure smooth 60fps on lower-end devices.

3. Zero-Secret Configuration
Using .NET user-secrets separates development credentials completely from Git history.
